

## Requirements Table

Problem Statement #60 – Podcast Guest Scheduling & Outline Builder  
Stakeholders / Actors: Podcast Guest, Show Host

| Req ID  | Type                                              | Description                                                                                                                                                                          | Priorit<br>y | Acceptance Criteria                                                                                                                                                                                                                                                   | Rationale                                                                                                                                    |
|---------|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| FR-001  | Functional                                        | The system shall allow guests to select interview time slots and submit structured bullet points for discussion topics with biography links.                                         | High         | Pass: Slot booked, calendar invite sent, and topic outline attached to episode board. Fail: Booking permitted on blocked dates.                                                                                                                                       | Core scheduling and content-collection function of the platform; without it no episode can be planned.                                       |
| FR-002  | Functional                                        | The system shall allow a show host to publish and edit a set of available interview time slots (one-off or recurring) that guests can browse before booking.                         | High         | Pass: A newly published slot appears in the guest-facing availability list within 5 seconds and is bookable; an edited/removed slot immediately disappears from the list. Fail: A removed slot remains bookable by a guest.                                           | Hosts must control their own calendar; guests can only book what the host has explicitly opened up.                                          |
| FR-003  | Functional                                        | The system shall automatically send a calendar invite containing the meeting link to both the guest and the host within 2 minutes of a slot being confirmed.                         | Mediu<br>m   | Pass: Both guest and host receive a calendar invite with a valid meeting link within 2 minutes of confirmation. Fail: Invite is missing, delayed beyond 2 minutes, or sent to only one party.                                                                         | Confirms the booking to both sides and reduces no-shows caused by manual coordination.                                                       |
| FR-004  | Functional                                        | The system shall allow a guest to reschedule or cancel a confirmed booking up to 24 hours before the scheduled interview time.                                                       | Mediu<br>m   | Pass: A cancellation/reschedule request made $\geq 24$ hours before the slot is accepted, the slot is freed on the host's calendar, and both parties are notified. Fail: A request made $< 24$ hours before the slot is silently accepted without notifying the host. | Gives guests reasonable flexibility while protecting the host from last-minute schedule disruption.                                          |
| FR-005  | Functional                                        | The system shall compile all confirmed bookings, guest topic outlines, and biography links for a given episode into a timestamped run-of-show production sheet.                      | High         | Pass: The generated sheet lists every confirmed guest for the episode in slot-time order, each with their submitted outline and bio link. Fail: A confirmed guest or their outline is missing from the generated sheet.                                               | Directly supports the host's on-air preparation, which is the core value proposition of the tool.                                            |
| NFR-001 | Nonfunction<br>al (Performanc<br>e &<br>Security) | The show outline generator must compile submitted guest topics into a formatted PDF production sheet in under 1 second, and all guest data in transit and at rest must be encrypted. | High         | Pass: Benchmarking tests confirm target latency and security standards under simulated peak load. Fail: Generation exceeds 1 second under peak load or data is found unencrypted at rest/in transit.                                                                  | Hosts often generate notes minutes before recording, so latency is critical; guest contact and bio data are sensitive and must be protected. |
| NFR-    | Nonfunction                                       | The booking interface shall allow a                                                                                                                                                  | Mediu        | Pass: Usability testing with 5                                                                                                                                                                                                                                        | Guests are often                                                                                                                             |

| Req ID | Type           | Description                                                                      | Priorit<br>y | Acceptance Criteria                                                                                                                                          | Rationale                                                                                                     |
|--------|----------------|----------------------------------------------------------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 002    | al (Usability) | guest to complete a slot booking in no more than 3 clicks/taps after logging in. | m            | representative guests shows 100% completing a booking in ≤3 clicks/taps. Fail: Any tester requires more than 3 clicks/taps or fails to complete the booking. | busy professionals booking between other commitments; a low-friction flow increases booking completion rates. |

Use Case Diagram - Podcast Guest Scheduling & Outline Builder

# Use-Case Flow Specification

## Problem Statement #60 – Podcast Guest Scheduling & Outline Builder

|                           |                                                                         |
|---------------------------|-------------------------------------------------------------------------|
| <b>Use Case ID</b>        | UC-02                                                                   |
| <b>Use Case Name</b>      | Book Interview Slot                                                     |
| <b>Primary Actor</b>      | Podcast Guest                                                           |
| <b>Secondary Actor(s)</b> | Show Host (receives confirmation), Calendar/Notification System         |
| <b>Related Use Cases</b>  | <<include>> Send Calendar Invite; extended by Reschedule/Cancel Booking |

### Preconditions

- The guest has a valid account and has been invited or has requested to appear on the podcast.
- The show host has published at least one open, unblocked interview time slot in the system.
- The guest is logged in and viewing the host's public availability calendar.

### Postconditions

#### Success:

- The selected slot is marked as booked and removed from other guests' view; a calendar invite with the meeting link has been sent to both the guest and the host; the booking appears on the episode production board awaiting the guest's topic outline.

#### Failure:

- No slot is reserved, the host's calendar is unchanged, and the guest is shown the current list of still-available slots.

### Main Success Scenario

1. Guest selects “Book Interview Slot” from the host's availability calendar.
2. System displays all open slots for the next 30 days, excluding any the host has blocked.
3. Guest selects a preferred date and time slot.
4. System validates that the slot is still available and not on a blocked date.
5. System prompts the guest to confirm their contact e-mail and time zone.
6. Guest confirms the details and submits the booking.
7. System locks the slot, marks it as booked, and triggers the included use case <<include>> Send Calendar Invite to notify both parties with the meeting link.
8. System adds the confirmed booking to the episode production board and shows the guest a success message with a link to submit their topic outline.
9. Use case ends successfully.

### Alternate Flow – 4a. Slot No Longer Available

- 4a1. System detects that the selected slot was booked by another guest or blocked by the host between steps 3 and 4.
- 4a2. System displays a “slot no longer available” message and refreshes the calendar with current openings.
- 4a3. Guest selects a different available slot, and the flow resumes at step 4.
- 4a4. If the guest closes the calendar without selecting another slot, the use case ends without a booking being created.
